```java
import java.util.Scanner;

public class LinearSearch {

    public static void main(String[] args) {
        Scanner sc = new Scanner(System.in);

        // Input array
        System.out.println("Enter the number of elements in the array: ");
        int n = sc.nextInt();
        int[] arr = new int[n];
        System.out.println("Enter the elements of the array: ");
        for (int i = 0; i < n; i++) {
            arr[i] = sc.nextInt();
        }

        // Input element to search
        System.out.println("Enter the element to search: ");
        int key = sc.nextInt();

        // Search for the element using linear search
        int index = linearSearch(arr, key);

        // Display result
        if (index == -1) {
            System.out.println("Element not found!");
        } else {
            System.out.println("Element found at index: " + index);
        }

        sc.close();
    }

    // Linear search function
    public static int linearSearch(int[] arr, int key) {
```

```
        for (int i = 0; i < arr.length; i++) {
            if (arr[i] == key) {
                return i;
            }
        }
        return -1;
    }
}
```
