Sustainable Development Multiple Choice Questions

WBPS

Sustainable development has led to a growth of the economy that does not jeopardise the planet's quality for subsequent generations. The United Nations established the Development Objectives (SDGs), often global goals, in 2015. It is a worldwide prompt to eradicate poverty and safeguard the environment. Nature has always sustained and nourished life on Earth, and it will remain to use in the upcoming years. Sustainable development is founded on the ethical notion of equity. According to equity, everyone should have equal access to social services and opportunities. Essential MCQs on environmental sustainability are provided here to assess your knowledge of the subject. For your convenience, the solutions are also provided.

Sustainable Development Multiple Choice Questions

1. Any contaminated components that seep into the soil, filtration, and are transferred into the underground reservoir are referred to as
