IIT Kharagpur

Becoming a Sustainable Leader

Sustainable leadership focuses on bringing about dramatic changes inside and outside organizations and calls for prospective sustainability leaders to be aware of the various traits, styles, skills and knowledge that he or she should have; the internal and external leadership actions that he or she should be taking; the leadership practices and principles that he or she should be following and disseminating and embedding throughout the organization; and the habits that have come to be associated with effective sustainability leadership. There is no universal curriculum for becoming a sustainable leader and things like traits, actions and practices will vary depending on the personality and temperament of the leader and the context in which he or she is operating; however, the elements listed below are based on the work of several researchers who have analyzed the training, experiences and practices of sustainable leaders in organizations selected from many countries and sectors. It is hoped that these elements can provide a foundation for the continuous study and work that is needed in order to become and remain an effective sustainable leader.

1. Traits

- Caring and morally-driven
- Honesty and trustworthiness in actions and relationships
- Systemic holistic thinker
- Enquiring and open-minded
- Self-aware and empathetic
- Visionary, tenacious and courageous
- Concern for disparities and injustices and commitment to human rights
- Respect for diversity and different ways of working, cultures and mindsets
- Passion for sustainability and commitment to a sustainable lifestyle

2. Styles

- Inclusive and engaging
- Collaborative
- Consensual decision making
- Empowering and trusting
- Visionary and creative
- Altruistic (guiding and helping others with the ultimate goal of improving their wellbeing)
- Servant (transcending self-interest to serve the needs of others)
- Radical

3. Skills

- Manage complexity and unpredictability
- Bridge disciplines and sectors
- Communicate vision
- Exercise judgement
- Challenge and innovate
- Staff and team management
- Managing diversity in the workplace and socially
- Think and plan long term

4. Knowledge

- Competence in domains relevant to organizational goals and purposes
- Awareness of ecological, economic, political, cultural and community contexts
- Global challenges and dilemmas
- Interdisciplinary connectedness
- Change dynamics and options
- Organizational influences and impacts
- Awareness of stakeholder roles and diverse stakeholder views

The SDGs will help drive improvements in sustainability **performance** and **communication** for companies, nonprofits, and governments

© 2016 Mel Wilson all rights

5. Internal Leadership Actions

- Organizational culture and reach
- Informed decisions
- Strategic direction
- Governance structure
- Role of leadership
- Management incentives
- Performance accountability
- People empowerment
- Learning and innovation

6. External Leadership Actions

- Cross sector partnerships
- Sustainable products and service
- Sustainability awareness
- Context transformation
- Stakeholder transparency

7. Leadership Practices

- Commitment to training and staff development programs

- Proactively striving for amicable labor relations
- Development of strategies for staff retention
- Shifting compensation programs toward metrics that valued contributions to customer loyalty and to innovation
- Promoting environmental and social responsibility
- Initiating communications with multiple stakeholders and transparently taking into account and balancing their interests
- Developing and embedding a shared vision for the goals of the business

8. Habits

- Taking a long-term perspective in making decisions
- Fostering systemic innovation aimed at increasing customer value
- Developing a skilled, loyal and highly engaged workforce
- Offering quality products, services and solutions
- Developing and maintaining the trust of organizational members and stakeholders
- Committing to and engaging in ethical behavior and decision making and establishing ethical values and standards throughout the organization

Drivers – Integrating Sustainability with Business Strategy & Operations

Investor/ Society / Customers

- Minimizing risk and maximizing opportunity
- Innovation - Growing demand for sustainable products
- Shareholder - responsible investment
- Sustainability Indexes- Dow Jones /FTSE4Good

REGULATORY

- Regional Sustainability Targets
- Product Governance & Compliance

VOLUNTARY

- Social Accountability Standards
- Health & Safety

Actions

Outcomes

Business Benefits

Triple bottom Line

Performance Leadership

- ✓compliance to regulations and responsiveness to social accountability
- ✓visibility and transparency to business governance and risk management strategies

- ✓Increased Competitiveness – Brand, Trust & Reputation

- ✓Resource Optimization

- ✓Repositioning with Clean Technologies and sustainable products

TABLE 4.1 The Components and Dimensions of Sustainable Leadership

Components of sustainable leadership	Dimensions of sustainable leadership	Features of sustainable leadership
POWER OF PERSONALITY	Institutional	Personality character traits, such as initiative, vitality, creativity and preservation, courage, fullness of personality, flexibility, alertness, honesty, self-confidence, balance, independence, autonomy, ambition, perseverance, will, ability to work, need of dominance, aggressiveness, formality, participation, and other important acquired competences are essential for sustainable leadership.
INTERACTION WITH FOLLOWERS	Social	Sustainable leadership is oriented towards people and based on the interaction with team members and followers; it strives to ensure continuity of leadership and to train other leaders.
VALUES, MISSION, VISION	Environmental	Sustainable leadership is focused on the objective, which is based on the vision, mission, and most importantly, sustainable (environmental, social, economic, etc.) values of a sustainable organization.
RESULTS	Economic	Sustainable leadership is objective-oriented and strives for concrete results.

Types of Intelligence Together with the Dimensions and Components of Sustainable Leadership

Sustainable leader	Needs	Types of intelligence	Q	Characteristics	Vocation	Components of sustainable leadership	Dimensions of sustainable leadership
Body	To live	Physical intelligence	PQ	Discipline	Need (to see emerging needs)	Personality power	Institutional
Mind	To learn	Rational intelligence	IQ	Vision	Talent (the volitional focus of attention)	Results	Economic
Heart	To love	Emotional intelligence	EQ	Enthusiasm	Enthusiasm (work satisfaction)	Interaction	Social
Spirit	To leave a footprint	Spiritual intelligence	SQ	Conscience	Conscience (to do what is right)	Vision and values	Environmental

SUSTAINABLE LEADERSHIP

Cooperate to improve your economic environment

Solidify your financial basics

Economic sustainability

Orient your business model towards a sustainable future

CEC
EUROPEAN MANAGERS

#SustainableLeadership
#leadership40

Sustainable Leadership Model

Acquired (through experiences) CEO demographic characteristics:

- 1 Educational level
- 2 Functional experience
- 3 International assignment experience
- 4 CEO tenure

Sustainable leader competencies:

- 1 Sustainable mindset
- 2 Systems thinking
- 3 Relationship building

Sustainable leader behaviors:

- 1 Lead efforts to fulfill company vision and strategy
- 2 Develop operationalization strategy
- 3 Acquire top management
- 4 Engage stakeholders across boundaries
- 5 Empower and nurture stakeholders
- 6 Maintain programs for continual communication
- 7 Establish performance management practices
- 8 Use ethics and integrity

Sustainability outcomes

Leaders need to become aware of:

- Their own sense of purpose and ways they can contribute to the well-being of others
- Who they are:
 - What their strengths are
 - What they enjoy doing
 - The professional and personal context they need in order to be successful (e.g., the role and importance of family, friends and colleagues)
- How they are part of a larger system
- How they depend on others for their own success and the success of their business
- What responsibility they have toward their workforce and external communities
- What responsibility they have toward the natural environment (e.g., the impact of their business upon the depletion of particular natural resources)
- What responsibility they have toward future generations

Environmental

Social

Procedural

Economic

Personal

Building Leadership for Sustainable Future

Core Values at **LEAD India** form one of the pillars of leadership **building-empathy, equity, Inclusiveness, accountability, combining traditional knowledge with scientific methods, temperance**

Theory "U"

Knowledge

Sustainable development across sectors;
Appropriate technologies and practices;
Best practices for balancing environment and development;
Climate change: risks, impacts, potential solutions and adaptation

Skills

Systems thinking;
Appreciative Inquiry;
Effective communication;
Building trust and rapport;
Stakeholder engagement;
Negotiation and Networking;
Adaptive Leadership;

Becoming a LEADER of tomorrow

Self Awareness

Who am I?; What drives my mental models and patterns?
What are my values?

Belief systems: What kind of future do I want and where am I headed?

People and events in my area of influence;

Global Leadership Training

- **Global leadership** is the need of hour. To be a truly effective leader, one should inculcate not only the **traditional leadership skills** but also the **global leadership competencies**. Just like any other traits, global leaders can be trained and one of the prerequisite for a global leader is **to have a self-actualized or a transformed self** because transformed self sets the ground on which **true global leaders can be made**.

Global Leaders Competencies

- Factors that aid in becoming a global leaders:-

<i>Context/circumstances</i>	<i>Attitudes</i>	<i>People</i>
- Undesirable circumstances (e.g. poverty, dead-end job) lead to a strong desire for something better; - Early experiences of leadership provide a taster; - Difficult circumstances provide an opportunity to learn.	- Willingness to move out of one's comfort zone and to "swim in water over one's head"; - Willingness to learn from failure ("what really matters is how fast you get up after you're knocked down" (p. 158); - Confidence to embrace risk.	- Key qualities (e.g. self-confidence) fostered by others, for example, a parent, a teacher; - Observes and learns from others—both what to do and what not to do; - Builds contacts—for support and for a resource network; - Connect with others—understand and support other staff.

Managing Self

1. Global Mindset
2. Inquisitiveness
3. Flexibility
4. Character
5. Resilience

Managing people and relationship

1. Valuing People
2. Cross- Cultural Communication.
3. Interpersonal Skills.
4. Empowering Others.
5. Teaming Skills.

Business and Organizational acumen

1. Vision and strategic thinking
2. Leading change
3. Business Savvy
4. Organizational Savvy
5. Managing communities.

Few keys elements that are essential to be a true global leaders are:-

1. Make your practice conscious practice

Most learning and growing as a leader takes place in real-life situations.

2. Build your support team

A personal support team is essential.

3. Know and go beyond limits

- *Don't limit 1. Make your practice conscious practice*
- *Most learning and growing as a leader takes place in real-life situations.*
- **4. Build your support team**
- *A personal support team is essential.*
- **5. Know and go beyond your limits**
- *Don't limit yourself—notice and reduce the ways in which you limit*

yourself; focus on what you're like when you're at your best.— notice and reduce the ways in which you limit yourself; focus on what you're like when you're at your best.

Sustainability ... A Competitive Advantage

- Fair-minded
- Impartial
- Dependable
- Integrity
- Authentic
- Ethical
- Trustworthy
- Honest
- Consistent

Developing Global Leadership Traits:-

Maxwell(2018) identifies five levels of leadership, arguing that global leaders should aim to move from Level 1 to Level 5:

The five levels of leadership

- **Level 1 (Rights):** People follow because they have to.
- **Level 2 (Relationships):** People follow because they want to.
- **Level 3 (Results):** People follow because of what you have done for the organization
- **Level 4 (Reproduction):** People follow because of what you have done for them.
- **Level 5 (Respect):** People follow because of who you are and what you represent.

Global Leadership

Leadership refers to an interpersonal influence in which leaders motivates followers to strive for a common acceptable goal. In short, leaders provide impetus to the followers so that they can transcend their self interests, individual values to collective interests and collective values

Globalization had transformed the world into a short village which had made the leadership a global phenomena. To excel in any leadership position leaders need not only leadership skills but also a global leadership traits.

- **The World Economic Forum (2019)**, in relation to their Global Leadership Fellowship program, describes **global leaders as dynamic, engaged and driven individuals who possess a high degree of intellectual curiosity and service-oriented humility**; an entrepreneur in the global public interest with a **profound sense of purpose** regardless of the scale and scope of the challenge.

Truly global leaders act as bridge builders, connectors of resources and talent across cultural and political boundaries. ... The global mind-set allows leaders to *connect* with individuals and organizations across boundaries.

5 Core Competencies of sustainability leadership

Transformational leadership

Transformational leadership serves to enhance the motivation, morale, and job performance of followers through a variety of mechanisms; these include connecting the follower's sense of identity and self to a project and to the collective identity of the organization; being a role model for followers in order to inspire them and to raise their interest in the project; challenging followers to take greater ownership for their work, and understanding the strengths and weaknesses of followers, which allows the leader to align followers with tasks that enhance their performance. It is also important to understand the qualities a transformational leadership can bring to a work organization.

Characteristics of Transformed Individual

**Need for
privacy.**

**Philosophical
Sense of
Humour.**

**Peak
Experiences.**

**Resistance to
enculturation.**

Creativeness.

**Transformed
individual are
characterized
by following
attributes:-**

- More efficient perception of reality.
- Acceptance of self, others and nature.
- Spontaneity, simplicity and naturalness.
- Problem-centered.
- Autonomy
- Continued Freshness of appreciation.
- Profound interpersonal relations.
- Community feeling and social interest.
- Democratic character structure.
- Discrimination between means and end.

- **Transforming self & others** is a process through which an individual is able to work in his or her full potential, is able to overcome the constraint imposed by individual levels, societal level and environmental level. Transforming self is both a process as well as result.
- As a process transforming self & others means identifying, accepting all the flows and working on it and as a result it means to work in a self-actualized manner.
- A transformed individual does not work for his/her selfish needs but aspire to work for the collective benefit for the whole society. A trait which is called self-transcendence.

Methods to be used in Self & Others transformation

- **Unconditional Positive Regard:-** When an individual praises, regard, values or accepts himself or others without any conditions, this is known as unconditional positive regard.
- **Empathetic Sensing:-** Accurately sensing the feelings an individual has about himself or others. Empathetic sensing and active acceptance can lead to positive self transformation.
- **Mindfulness:-** a mental state achieved by focusing once attention towards the present, acknowledging and accepting what one is feeling, thinking and behaving currently.
- **Reflective thinking**
- **Metacognition**

Steps involved in Transforming Self & Others

- **Step 1:- Active Acceptance**

Individual cannot change anything they accept it there is lack of something and current lifestyle had lead to high frequency of anxiety, desperation, depression and regret. Actively accepting there is a need for change.

- **Step 2:- Identifying what type of change is most conducive to fulfilling life.**

Individual should change the current lifestyle and replace it with a lifestyle that leads to self-actualization.

- **Step 3:- Identification of aim or purpose in life and acting on that purpose.**

Pursuing a challenging goal requires individual to leave their comfort zone as individual develop new skills to cultivate self-discipline and which eventually leads to self-transformation.

- **Step 4:- Continuously striving to lead a self-actualized and purposeful life.**

11 SUSTAINABLE CITIES AND COMMUNITIES

LECTURE : 54

Prof. Atasi Mohanty
Rekhi Centre of Excellence for the Science of Happiness,
IIT Kharagpur

- Everything that we need for our survival and well-being depends, either directly or indirectly, on our natural environment.
- To pursue sustainability is to create and maintain the conditions under which humans and nature can exist in productive harmony to support present and future generations;
- In order to be sustainable, communities must put the environment at the forefront.
- Sustainable planning considers how to minimize inputs like energy, water, and food, as well as how to reduce waste outputs of heat, air pollution, and water pollution.
- Targets for achieving Goal 11 – Sustainable Cities and Communities – include reducing the adverse effects of natural disasters, ensuring everyone has access to green spaces and addressing the environmental impact of cities.

- A sustainable city concept incorporates **eco-friendly practices**, **green spaces** and **supporting technology** into the urban environment to **reduce air pollution** and **CO2 emissions**, enhance **air quality**, and protect natural resources.
- These practices lead to a **healthier environment** for city residents and a lower carbon footprint for the city.
- Sustainable cities are becoming essential in the quest to **reverse global climate change**.
- A sustainable city is an urban center engineered to **improve** its **environmental impact** through **urban planning and management**.
- **Green technology** is a **key factor** that is helping to foster more sustainable urban development.
- It comprises all aspects of **city planning**, including **transportation**, **infrastructure**, **telecommunications** and **energy**.

MAKE CITIES AND HUMAN SETTLEMENTS INCLUSIVE, SAFE, RESILIENT AND SUSTAINABLE

- **Characteristics and Key Features of a Sustainable City**
- Cities can do a number of things to support sustainable practices:
- Make it easy to get around without a car
- Add EV charging stations
- Provide access to public resources and green spaces
- Improve water conservation and wastewater management
- Support urban farming, Implement green architecture
- [Connecting Green Tech with IoT – YouTube](#)
- [Understand Goal 11: Sustainable Cities and Communities \(Secondary\) - YouTube](#)

- The concept of “**Sustainable Cities and Communities**” of the World Bank’s Urban, Disaster Risk Management, Resilience and Land Global Practice (GPURL) includes four key dimensions:
- First, Sustainable Communities are **environmentally sustainable** in terms of **cleanliness and efficiency**.
- Second, Sustainable communities are **resilient to social, economic, and natural shocks**. They are **well prepared for natural disasters**, which are increasing in intensity and frequency due to climate change.
- Third, **Sustainable Communities are inclusive communities**. They bring all dimensions of society and all groups of people—including the marginalized and vulnerable—into their markets, their services, and their development.
- And finally, Sustainable Communities are **competitive communities** that can **stay productive and generate jobs for members of the community**.

A true eco-city will need to address the social, environmental and economic impact of sustainability.

- **Characteristics of a Sustainable City**
- 1. **Public transportation**: Electric trolleybuses, Metro systems, Underground railways , Maglev trains
- 2. **Walkable and bike-able neighborhoods**: Pedestrian bridges ,Bike path networks, Connected urban grids, Shared micro-mobility
- 3. **Vehicle charging stations**: Electric vehicle, Hydrogen powered car
- 4. **Solar farms**
- 5. **Green buildings**: Smart heating and cooling systems, Natural building materials, Enhanced ventilation and insulation, Solar panels, Green roofs
- 6. **Food production** :Eco-friendly, organic food & vegetables

Sustainable city solutions for a greener urban world

11 SUSTAINABLE CITIES AND COMMUNITIES

LECTURE : 55

Prof. Atasi Mohanty
Rekhi Centre of Excellence for the Science of Happiness,
IIT Kharagpur

- **7. Accessible public resources**
- Public health buildings, economic development centers, technology hubs
- **8. Water conservation**
- Rainwater harvesting, Green infrastructure, Waterless hardware
- **9. Public green spaces**
- **10. Waste management**

Sustainable cities aim to **reverse negative impacts of urbanization** by:

Consuming fewer resources

Reducing greenhouse gases

Fighting climate change

Creating a sense of place

• Why are Sustainable Cities important???

Cities occupy **just 3% of the Earth's land** yet account for 60–80% of energy consumption

90% of urban inhabitants are breathing in unsafe air, resulting in **4.2 million deaths** annually

Bold climate action could deliver at least **\$26 trillion in economic benefits** through 2030

3 ways sustainable cities aim to create positive change

Social
connection

Environmental
impact

Economic
solutions

Transportation

Affordable
public transit

Vehicle charging
stations

Walkable/bikeable
neighborhoods

Energy management

Green
infrastructure

Advanced water
management

Solar farms

Public amenities

Accessible
public resources

Green municipal
buildings

Public
green spaces

Common urban challenges include **congestion, a lack of funds to provide basic services, a shortage of adequate housing and deteriorating infrastructure**. These challenges can be overcome in ways that allow cities to continue to thrive and grow, while **improving resource use and reducing pollution and poverty**. The desirable future is one in which cities **provide access to basic services, energy, housing, transportation and more opportunities for all**.

Complex Dynamics between Cities and Climate Change. Source: Adapted from Al-Zu'bi (2017).

➤ Increasing motorization not only brings problems related to congestion, travel times and fuel consumption, pollutant emissions and environmental degradation, the encroachment of residential areas and increasingly poor road safety with very high rates of injuries and deaths, but also makes it difficult for most people to have full access to the public transport system.

- Efforts to address housing informality by adopting a strategy of granting legal titles to land without the comprehensive development of settlements have not automatically guaranteed better access to public services.
- While many countries in the region have been able to reduce the quantitative housing deficit, mainly through demand-side subsidies, locating social housing in peripheral areas has driven urban sprawl and deepened socioeconomic residential segregation.
- In the region there is still the challenge of planning cities that contribute to a better and fairer use and distribution of time and to the more equal enjoyment of rights by men and women. Inclusive cities must be designed, with a spatial distribution that takes into account the complexity and diversity of the daily needs and capabilities of their inhabitants.

- The lack of access to clean energy sources, safe drinking water and improved sanitation facilities in slum dwellings also has adverse impacts on health.
- All these urban challenges are exacerbated by the difficulty of creating locally appropriate institutional and legal structures to promote sustainable urbanization. This challenge is accentuated in the financial systems of Latin America and the Caribbean, where there are large asymmetries between spending responsibilities and commitments, both at different levels of government and within cities.
- Poorly planned and managed urbanization translates into low densities, separation of land uses, a mismatch between infrastructure provision and residential concentration, as well as inadequate road networks and public spaces. It also diminishes the potential of using economies of scale and agglomeration, and generates higher emissions.

• Opportunities

- **Public policies must address the problems of cities** —where economic and social power are concentrated— as well as the opportunities offered by action in this sphere to meet the challenges of sustainable development. The actions of all levels of government must be aligned to promote cohesive policies that ensure efficient patterns of spatial development.
- **Organized and consistent urban planning should encourage dense, contiguous development on the edges of urban areas**, modernize existing urbanized areas, improve the diversity and quality of life in urban centres and minimize the adverse effects of climate change on cities.
- Each city must be understood as part of a system of cities at the local, national, regional and global levels. This conceptualization of the city provides a **multidimensional approach based on interactions and connectivity**. Cities should be considered centers of **social, economic and cultural interaction**, **capable of fostering productive growth** and achieving sustainable development at all levels.
- **Inclusion of time-use analysis in urban planning** makes it possible to build cities that take into account the needs of all the people who live in them and thus promote a reduction in inequality and a more equal enjoyment of rights by women and men.

• Recommendations to achieve SDG 11 and its targets

- Greater investment in public transport systems and urban infrastructure is needed, paying special attention to the needs of those in vulnerable situations, women, children, persons with disabilities and older persons, to improve the quality and efficiency of public transport, and to ensure the inclusiveness, safety and environmental sustainability of cities.
- The world has seen unprecedented urban growth in recent decades. Thus, urban planning and management must be improved to ensure that urban spaces worldwide are more inclusive, safe, resilient and sustainable.
- It is important for urban planning to be performed with a gender approach aimed at reducing gaps and responding to the different needs of the population, as well as their different uses of time, space and services, contributing to the transformation of the current sexual division of labour.
- Environmental and social impacts must be considered in the design, planning and construction of infrastructure to ensure that services are provided and that the concerns of the affected communities are addressed.

GOAL 11. Make cities and human settlements inclusive, safe, resilient and sustainable

TARGET 11.1 By 2030, ensure access for all to adequate, safe and affordable housing and basic services and upgrade slums

Global **INDICATOR 11.1.1** Proportion of urban population living in slums, informal settlements or inadequate housing

[Global Metadata](#)

TARGET 11.2 By 2030, provide access to safe, affordable, accessible and sustainable transport systems for all, improving road safety, notably by expanding public transport, with special attention to the needs of those in vulnerable situations, women, children, persons with disabilities and older persons

Regional **INDICATOR C-11.2** Average time (in minutes) spent commuting

TARGET 11.3 By 2030, enhance inclusive and sustainable urbanization and capacity for participatory, integrated and sustainable human settlement planning and management in all countries

Global **INDICATOR 11.3.1** Ratio of land consumption rate to population growth rate

[Global Metadata](#)

TARGET 11.4 Strengthen efforts to protect and safeguard the world's cultural and natural heritage

TARGET 11.5 By 2030, significantly reduce the number of deaths and the number of people affected and substantially decrease the direct economic losses relative to global gross domestic product caused by disasters, including water-related disasters, with a focus on protecting the poor and people in vulnerable situations

Global **+ INDICATOR 11.5.2** Direct economic loss in relation to global GDP, damage to critical infrastructure and number of disruptions to basic services, attributed to disasters

Global
Metadata

TARGET 11.6 By 2030, reduce the adverse per capita environmental impact of cities, including by paying special attention to air quality and municipal and other waste management

Global **+ INDICATOR 11.6.1** Proportion of municipal solid waste collected and managed in controlled facilities out of total municipal waste generated, by cities

Global
Metadata

Global **+ INDICATOR 11.6.2** Annual mean levels of fine particulate matter (e.g. PM2.5 and PM10) in cities (population weighted)

Global
Metadata

TARGET 11.7 By 2030, provide universal access to safe, inclusive and accessible, green and public spaces, in particular for women and children, older persons and persons with disabilities

Global **INDICATOR 11.7.2** Proportion of persons victim of physical or sexual harassment, by sex, age, disability status and place of occurrence, in the previous 12 months

Global
Metadata

TARGET 11.a Support positive economic, social and environmental links between urban, peri-urban and rural areas by strengthening national and regional development planning

TARGET 11.b By 2020, substantially increase the number of cities and human settlements adopting and implementing integrated policies and plans towards inclusion, resource efficiency, mitigation and adaptation to climate change, resilience to disasters, and develop and implement, in line with the Sendai Framework for Disaster Risk Reduction 2015–2030, holistic disaster risk management at all levels

TARGET 11.c Support least developed countries, including through financial and technical assistance, in building sustainable and resilient buildings utilizing local materials
