SYLLOGISM: INTRODUCTION

The questions which are asked in this section contain two or more statements and these statements are followed by two or more conclusions.

You have to find out which of the conclusions logically follow from the given statements.

The statements have to be taken true even if they seem to be at variance from the commonly known facts.

For such questions, you can take the help of *Venn Diagrams*.

On the basis of the given statements, you should draw all the possible diagrams, and then derive the solution from each of these diagrams separately.

Finally, the answer common to the all the diagrams is taken.

(X), one of the dots lies in the region common to the circle and the square only, another dot lies in the region common to the square, the triangle and the rectangle only and the third dot lies in the region common to the triangle and the rectangle only. In each of the figures (1), (2) and (3) there is no region common to the square, the triangle and the rectangle only. Only fig. (4) consists of all the three types of regions.
