

Assignment 1

Subject: Introduction to Web Technology (BCO215A)

Semester: VII – B.Tech (CSE)

Section A (2×5 = 10 Marks)

Q1. Define the term CMS?

A **CMS (Content Management System)** is a software application that helps users create, manage, and modify content on a website **without needing advanced technical skills** like coding.

- It provides a **user-friendly interface** to add text, images, videos, and other content.
- Examples: **WordPress, Joomla, Drupal**.

👉 In simple words: **CMS is a tool that makes building and managing websites easy, just like using MS Word to write documents.**

Q2. Describe all the types of web content management system?

There are mainly **three types of Web CMS**:

1. **Open-source CMS**
 - Free to use and customize.
 - Example: **WordPress, Joomla, Drupal**.
 - Advantage: Flexible, cost-effective.
 2. **Proprietary (Commercial) CMS**
 - Paid software developed by a company.
 - Example: **Sitecore, Adobe Experience Manager**.
 - Advantage: Comes with support, security, and professional services.
 3. **Software as a Service (SaaS) CMS**
 - Cloud-based; you don't need to install anything.
 - Example: **Wix, Squarespace**.
 - Advantage: Easy to use, automatic updates, hosting included.
-

Q3. What do you mean by multi-channel publishing?

Multi-channel publishing means creating content once and delivering it across **different platforms** like:

- Websites
- Mobile apps
- Social media
- Emails
- Printed material

👉 Example: If you write a news article in CMS, it can automatically appear on the **website, mobile app, and social media pages** without rewriting it.

Q4. Define all the features of CMS?

Key features of a **CMS** are:

1. **Content Creation & Editing** – Provides text editors, drag & drop features.
2. **Content Storage** – Stores content in a structured way (database).
3. **Content Publishing** – Allows publishing to websites, apps, etc.
4. **User Management** – Different roles like admin, editor, contributor.
5. **Templates & Themes** – Pre-designed layouts for websites.
6. **Media Management** – Upload and manage images, videos, and documents.
7. **Version Control** – Keeps history of content changes.
8. **SEO Tools** – Helps in optimizing content for search engines.
9. **Security** – Provides login authentication and data protection.

Q5. What is a component?

In **CMS**, a **component** is a **reusable building block** that provides specific functionality to a website.

- Example: A **contact form**, a **search box**, a **gallery**.
- Components help extend CMS features without coding from scratch.

Section B (3×7 = 21 Marks)

Q1. Write the difference between CMS and CCMS?

Feature	CMS (Content Management System)	CCMS (Component Content Management System)
Definition	Manages entire documents or web pages.	Manages content at the component (small piece) level.

Feature	CMS (Content Management System)	CCMS (Component Content Management System)
Granularity	Works with full pages/articles.	Works with small parts (paragraphs, images, tables).
Use Case	Websites, blogs, eCommerce.	Technical documents, manuals, policies.
Reusability	Limited – reuse whole pages only.	High – reuse specific sections in multiple places.
Examples	WordPress, Joomla.	Adobe FrameMaker, IXIASOFT.

Q2. What is WCMS? How does it work?

WCMS (Web Content Management System) is a type of CMS specifically designed to manage **web content**.

How it works:

1. **Content Creation** – Authors create text, images, and videos using an editor.
2. **Storage** – Content is stored in a database.
3. **Design & Template** – WCMS separates content from design. Templates define how content looks.
4. **Publishing** – Content is displayed on the website through templates.
5. **User Roles** – Admin, editor, and viewer roles manage workflow.

👉 Example: **WordPress** is a popular WCMS.

Q3. Define the term ECM? Why it is important? Also write its advantages and disadvantages.

ECM (Enterprise Content Management) is a system used by organizations to **capture, store, manage, and deliver content** like documents, images, emails, and records.

Importance of ECM:

- Helps businesses manage huge amounts of information.
- Improves collaboration and efficiency.
- Ensures compliance with legal and security standards.

Advantages:

1. Centralized storage of documents.
2. Faster retrieval of data.
3. Secure access to sensitive information.

4. Improves productivity and workflow.

Disadvantages:

1. High initial cost.
 2. Requires training for staff.
 3. Complex setup for small organizations.
 4. Maintenance can be expensive.
-

Section C (3×11 = 33 Marks)

[CO1] 1. Explain the term Blogs in detail.

Answer:

A **blog** (short for “weblog”) is a type of website where people share information, ideas, or personal thoughts in the form of articles called **posts**. Blogs usually show the **latest post first** and the older posts below it.

1. Main Features of a Blog

- **Reverse Order:** New posts appear on top, older ones below.
- **Personal Style:** Blogs are often written in a friendly or casual tone.
- **Comments Section:** Readers can write their opinions below each post.
- **Archives:** Older posts are stored by date or topic for easy access.
- **RSS Feed:** Readers can subscribe and get updates when new posts are published.

2. Structure of a Blog Post

- **Title:** The heading of the article.
- **Author & Date:** Shows who wrote it and when.
- **Content (Body):** The main text, pictures, or videos.
- **Categories/Tags:** Keywords to organize posts.
- **Comments:** Place for readers’ feedback.

3. Types of Blogs

- **Personal Blogs:** About daily life, hobbies, or personal experiences.
- **Business/Professional Blogs:** Used by companies to share updates and promote products.
- **Niche Blogs:** Focused on one topic like food, travel, technology, fashion, etc.

4. Blogging Platforms

The most popular platforms are **WordPress, Blogger, and Medium**. These tools make it very easy to create and manage a blog without needing coding.

5. Importance of Blogs

- For **individuals** → A way to express thoughts, share knowledge, or even earn money.
- For **businesses** → A way to promote products, attract customers, and improve Google ranking (SEO).

👉 In short: A blog is an easy and interactive way to share regular updates, ideas, and information with the world.

[CO1] 2. How can you install WordPress by using a Web Host's "1-Click Install"?

Answer:

Most hosting companies provide a **1-Click Install** option, which makes it very easy to set up WordPress without any technical knowledge.

Steps to Install WordPress (1-Click Install):

1. **Login to Hosting Account**
 - After buying hosting and a domain, log in to your hosting control panel (like cPanel).
2. **Find the Installer**
 - Look for "WordPress Installer," "Softaculous," or "QuickInstall" under the **Applications/Software** section.
3. **Choose WordPress**
 - Click on the WordPress option and then click **Install Now**.
4. **Fill Basic Details**
 - **Domain Name:** Select your domain (e.g., mywebsite.com).
 - **Site Name & Description:** Enter your website's name and a short tagline.
 - **Admin Username & Password:** Create login details to manage your site.
 - **Admin Email:** Provide an email for notifications and password recovery.
5. **Start Installation**
 - Click on **Install**. The system will automatically set up WordPress.
6. **Access Your Website**
 - Once done, you get two links:
 - Website URL → www.mywebsite.com
 - Admin Login → www.mywebsite.com/wp-admin

👉 Now you can log in with your username and password, choose a theme, and start creating posts and pages.

[CO1] 3. Explain all the five elements of ECM.

Answer:

ECM (Enterprise Content Management) helps companies manage information like documents, images, and records. It has **five important elements**:

1. Capture

- Means **collecting and bringing information into the system**.
- This can be done by scanning paper files, uploading digital files, or saving emails.
- Example: Scanning an invoice or uploading a PDF report.

2. Manage

- Organizing and controlling the content once it is captured.
- Includes:
 - **Version control** (keeping track of changes).
 - **User roles** (who can view or edit files).
 - **Metadata** (tags like date, author, project).
- Example: A contract is managed by giving access only to the legal team.

3. Store

- Saving documents safely for **short-term use**.
- Important files are stored in databases or servers.
- Example: Current year's project files are stored on the company's main server.

4. Preserve

- Keeping information safe for **long-term use**.
- Ensures files are not lost, damaged, or outdated.
- Example: Old tax records are preserved for many years to meet legal rules.

5. Deliver

- Making the right content available to the right people at the right time.
- Can be done through websites, search tools, or automated workflows.
- Example: An employee searches for a company policy and gets it instantly from the system.

👉 Together, these five steps (**Capture, Manage, Store, Preserve, Deliver**) cover the **entire life cycle of information** in an organization.
