

Assignment #2

Subject: Introduction to Web Technology (BCO215A)

Semester: VII – B.Tech (CSE)

Marks: 64

Section A (2×5 = 10 Marks)

Q1. Define the term Permalinks?

Answer:

A permalink (short for “permanent link”) is the full URL (website address) of a specific post, page, or article on a website.

- It is called “permanent” because the link should not change over time.
- Example:
 - Home page → www.example.com
 - Blog post permalink → www.example.com/my-first-blog

👉 In simple words, permalinks are web addresses you share with others to directly access a page/post.

Q2. Differentiate between internal linking and external linking.

Answer:

Feature	Internal Linking	External Linking
Definition	Links that connect one page of a website to another page on the same website.	Links that connect a page of one website to a different website.
Purpose	Helps visitors navigate within the same site.	Refers visitors to useful outside sources.
Example	From about-us page linking to contact-us page on the same site.	A blog linking to a news article on www.bbc.com .

👉 Internal = within the same site, External = goes to another site.

Q3. What do you mean by tags?

Answer:

Tags are keywords or labels used in blogs and WordPress to describe the topics of a post.

- They make it easier for visitors to find related content.
- Example: In a recipe blog, a post about pasta may have tags like “Italian,” “Pasta,” “Dinner”.

👉 Tags work like hashtags (#) on social media.

Q4. Describe the term root directory and sub directory?

Answer:

- **Root Directory:**
 - The main folder of a website where all files and folders are stored.
 - Example: `public_html` is often the root directory on hosting servers.
- **Sub Directory:**
 - A folder inside the root directory that organizes files.
 - Example: `public_html/blog` → here `blog` is a sub directory.

👉 Root = main folder, Sub = folder inside it.

Q5. What is Quick Draft?

Answer:

Quick Draft is a tool in the WordPress Dashboard that lets you quickly write down ideas, titles, or short notes for a blog post.

- You can save it as a draft and complete it later.
- Useful for quickly capturing ideas.

👉 Like a sticky note inside WordPress for your blog ideas.

Section B (3×7 = 21 Marks)

[CO2] 1. Explain the term WYSIWYG editor?

Answer:

WYSIWYG stands for “**What You See Is What You Get.**”

It means whatever you create on the screen will look almost the same when it is published on the website.

- Before these editors, people had to write HTML code like `<b>Bold Text</b>` to make text bold. That was difficult for beginners.
- With WYSIWYG editors, you don’t need coding. You just select the text and click the **B** button, and it becomes bold – just like in MS Word.

How it works:

- It shows a **visual editor** with buttons (Bold, Italic, Insert Image, List, etc.).
- Behind the screen, it automatically writes the correct HTML code.

- So, users can focus on designing content instead of writing code.

Example: The WordPress editor (Block Editor/Gutenberg) is a WYSIWYG editor.

[CO2] 2. Discuss all the sizes of media setting.

Answer:

In WordPress, when you upload an image, it creates multiple copies of it in different sizes. This makes your site load faster because it uses smaller images where needed.

You can find these settings in **Dashboard > Settings > Media**.

Types of Image Sizes:

1. **Thumbnail (150 x 150 px):**
 - Very small images, usually square.
 - Used in post previews, galleries, and widgets.
2. **Medium (up to 300 x 300 px):**
 - A bit bigger, used inside blog posts.
 - Good for images that should fit within the text.
3. **Large (up to 1024 x 1024 px):**
 - Big image size.
 - Used for detailed images on posts or pages.
4. **Full Size:**
 - The original image you uploaded.
 - Used when visitors want to see the full picture.

Why it matters?

- Helps in faster website loading.
 - Keeps image quality good in all places.
-

[CO2] 3. How can you set up WordPress?

Answer:

After installing WordPress, you need to set it up. Here are the main steps:

1. **Login to Dashboard:**
 - Open yoursite.com/wp-admin.
 - Enter your username and password.
2. **Basic Settings (Settings > General):**

- Set **Site Title** (e.g., My Blog).
 - Add a tagline (short description).
 - Set timezone, date format, and language.
3. **Set Permalinks (Settings > Permalinks):**
- Choose **Post Name** option.
 - Example: mysite.com/my-first-post (clean and SEO-friendly).
4. **Comment Settings (Settings > Discussion):**
- Decide who can comment.
 - Turn on moderation to reduce spam.
5. **Choose a Theme (Appearance > Themes):**
- Select a design for your site.
 - Customize colors, menus, and layout.
6. **Create Important Pages (Pages > Add New):**
- Homepage
 - About Us
 - Contact Us
7. **Set Navigation Menu (Appearance > Menus):**
- Add pages to the main menu.
 - Choose where it will appear (Header/Footer).

✅ After this, your WordPress site is ready for posting blogs and adding plugins for extra features.

Section C (3x11=33 Marks)

[CO2] 1. Explain the WordPress Dashboard in detail.

Answer:

The WordPress **Dashboard** is the control panel of your site. It is the first screen after login (yoursite.com/wp-admin).

Main parts of Dashboard:

1. **Dashboard Home (Widgets):**
 - **At a Glance** → shows number of posts, pages, and WordPress version.
 - **Activity** → shows recent posts and comments.
 - **Quick Draft** → write quick ideas for posts.

- **WordPress News** → latest updates from WordPress.
- 2. **Top Admin Bar (Black Bar):**
 - Always visible at the top.
 - Quick links to add posts, check comments, or view site.
- 3. **Left Sidebar Menu:**
 - **Dashboard** → Home and Updates.
 - **Posts** → Manage all blog posts.
 - **Media** → Upload and manage images/videos.
 - **Pages** → Create static pages like About, Contact.
 - **Comments** → Approve, reply, or delete comments.
 - **Appearance** → Themes, menus, widgets.
 - **Plugins** → Add new features to your site.
 - **Users** → Manage user accounts (Admin, Editor, Author).
 - **Tools** → Import, export, or check site health.
 - **Settings** → General, Writing, Reading, Discussion, Media, Permalinks.

✅ In short, the Dashboard is the **command center** of WordPress.

[CO2] 2. Discuss all the options used for setting Avatar in WordPress.

Answer:

An **Avatar** is a small image that shows next to a user's name in posts or comments.

You can set avatar options in **Settings > Discussion**.

Options available:

1. **Show Avatars:**
 - Checkbox to show or hide avatars on the site.
2. **Maximum Rating:**
 - Filters avatars based on rating (like movie ratings).
 - **G:** Safe for all.
 - **PG:** May have mild content.
 - **R:** For adults.
 - **X:** Strong adult content.
3. **Default Avatar:**

- If a user doesn't have their own avatar, WordPress shows one of these:
 - Mystery Person → simple silhouette.
 - Blank → no image.
 - Gravatar Logo → shows Gravatar logo.
 - Identicon → geometric pattern.
 - Wavatar → cartoon face.
 - MonsterID → monster-style avatar.
 - Retro → old 8-bit style face.

What is Gravatar?

- Gravatar = Globally Recognized Avatar.
- If a user has a Gravatar account linked to their email, their avatar will automatically show on your WordPress site.

✓ These settings help control how users' profile images appear.

[CO2] 3. Describe all the options of the Dashboard menu.

Answer:

The **Dashboard menu** is the left sidebar. It gives access to all parts of WordPress.

Options in Dashboard Menu:

1. **Dashboard:** Overview and Updates.
2. **Posts:** Manage blog posts (Add, Edit, Categories, Tags).
3. **Media:** Manage images and videos.
4. **Pages:** Create static pages (About, Contact).
5. **Comments:** Approve, reply, or delete comments.
6. **Appearance:** Themes, Customize, Widgets, Menus, Theme Editor.
7. **Plugins:** Install and manage plugins.
8. **Users:** Manage accounts and roles.
9. **Tools:** Import, Export, Site Health.
10. **Settings:** General, Writing, Reading, Discussion, Media, Permalinks.

✓ This menu is like the **main control list** for everything in WordPress.
