

SECTION A ($2 \times 5 = 10$ Marks)
(Each answer is brief, 2 marks each)

Q1. [CO3] Define the term Fighting spam in terms of WordPress?

Answer:

Fighting spam in WordPress refers to the process of preventing unwanted or automated comments, form submissions, and fake user registrations generated by bots. WordPress offers built-in tools like **comment moderation**, **blacklist settings**, and plugins like **Akismet**, **reCAPTCHA**, and **Anti-Spam Bee** to detect and block spam activities automatically.

Q2. [CO3] Discuss managing comments in terms of WordPress.

Answer:

Managing comments in WordPress involves approving, deleting, replying, marking as spam, or holding comments for moderation. This is done through the **Comments Dashboard**. WordPress also allows changing comment settings such as enabling/disabling comments, requiring login to comment, auto-closing comments on older posts, and using filters to reduce spam.

Q3. [CO3] What do you mean by adding image gallery in terms of WordPress?

Answer:

Adding an image gallery in WordPress means inserting a collection of multiple images inside a page or post using the built-in **Gallery Block** or plugins like **NextGEN Gallery**. It allows users to display photos in a grid, slideshow, carousel, or lightbox format to enhance visual content.

Q4. [CO3] What do you mean by editing an existing image gallery in terms of WordPress?

Answer:

Editing an existing image gallery means modifying the gallery created earlier by changing images, adding new ones, removing images, rearranging order, or adjusting layout settings. This can be done through the block editor (Gutenberg) by selecting the gallery block and using its edit options.

Q5. [CO3] What is widgets in terms of WordPress?

Answer:

Widgets in WordPress are small blocks that perform specific functions and can be placed in widget-ready areas like sidebars, footers, and headers. Common widgets include Search, Recent Posts, Categories, Calendars, Social Icons, Text/HTML, etc. Widgets help customize site layout without coding.

SECTION B ($3 \times 7 = 21$ Marks)
(Medium length answers, 7 marks each)

Q1. [CO3] Explain the WordPress Audio files in detail.

Answer:

WordPress supports uploading and embedding audio files directly into posts and pages. Supported formats include **MP3**, **WAV**, **OGG**, etc. Audio can be added using:

- ✓ **Audio Block** in Gutenberg editor
- ✓ **HTML5 audio shortcode** → `[audio src="file.mp3"]`
- ✓ **Playlist feature** to play multiple audio files

Features of WordPress audio:

1. **In-browser audio player** (play, pause, seek)
2. **Supports self-hosted and external URLs** (SoundCloud, Spotify)
3. **Audio metadata support** (title, artist, album)
4. **Customizable display options via CSS**
5. **Plugins available** (Compact WP Audio Player, PowerPress Podcasting)

Uses:

- Podcasts
- Music albums
- Language listening practice
- Meditation or guided voice recordings

Thus, WordPress provides a complete media management system for audio content.

Q2. [CO3] Discuss use of Google FeedBurner with WordPress.

Answer:

Google FeedBurner is a web feed management service used to optimize and analyze RSS feeds. When integrated with WordPress, it helps in:

1. **Enhancing RSS Feeds** – converts basic feed to attractive, branded feed.
2. **Email Subscription Service** – users can subscribe via email to receive new post updates.
3. **Traffic Analytics** – shows number of subscribers, clicks, and reach.
4. **Ping & Auto-Update** – notifies search engines whenever a new post is published.
5. **Feed Customization** – allows adding copyright, branding, ads, or social links.
6. **Monetization** – supports Google AdSense for feeds.
7. **Browser Friendly View** – formatted, readable feed layout instead of raw XML.

WordPress users simply redirect default RSS feed to FeedBurner using plugins like **FD FeedBurner Plugin**.

Q3. [CO3] Discuss setup and display of RSS feed in terms of WordPress.

Answer:

RSS (Really Simple Syndication) allows users to subscribe to content updates. WordPress automatically generates feeds for posts, comments, categories, authors, etc., using URLs like:

- [yoursite.com/feed/](#) (main feed)
- [yoursite.com/comments/feed/](#)

Steps to Set Up RSS Feed in WordPress:

1. Go to **Settings** → **Reading** and enable feed options.
2. Use plugins like **WP RSS Aggregator** or **Feedzy** for advanced feed controls.
3. Redirect feed to FeedBurner if required.
4. Configure feed length & number of items.

Display RSS Feed on Website:

- ✓ Using **RSS Widget** in Appearance → Widgets
- ✓ Using **RSS block** in Gutenberg editor
- ✓ Using shortcode [rss] from plugin
- ✓ Embedding external RSS feeds (for news, blogs, etc.)

RSS helps in:

- Blog subscription
- Podcast feed distribution
- Improving SEO and traffic
- Automation in news sites

SECTION C (3 × 11 = 33 Marks)

(Long descriptive answers, 11 marks each)

Q1. [CO3] Explain adding video embedding in terms of WordPress in detail.

Answer:

Video embedding in WordPress refers to inserting videos from platforms like YouTube, Vimeo, Facebook, or self-

hosted files into posts/pages. WordPress supports **oEmbed** technology, allowing users to paste a video URL and embed automatically.

Methods to Embed Video:

1. **Using Video Block (Gutenberg)** – paste URL into Video block.
2. **Direct URL Paste** – WordPress auto-embeds if URL is in separate line.
3. **Using Classic Editor Embed Code** – switch to HTML and paste iframe code.
4. **Plugins** – e.g., **Embed Plus for YouTube, WP Video Lightbox, Presto Player**.
5. **Shortcodes** – [video src="movie.mp4"] for self-hosted videos.

Supported Video Platforms:

- YouTube
- Vimeo
- Dailymotion
- TikTok
- Facebook Watch
- Twitch
- Wistia

Advantages of Embedding:

- ✓ Saves hosting space
- ✓ Faster page loading (CDN usage)
- ✓ Auto responsive
- ✓ SEO improvement with video schema

Video Settings:

- Autoplay
- Loop
- Mute
- Captions/subtitles
- Thumbnail and theme control

WordPress provides a flexible and user-friendly way to add video content without coding.

Q2. [CO3] Discuss advance features for WordPress.

Answer:

Advanced WordPress features make it a complete CMS beyond simple blogging:

Feature	Description
Custom Post Types (CPT)	Allows creating custom content like events, portfolios, testimonials
REST API	Allows headless WordPress development for mobile apps, React/Angular frontends
Multisite Network	Create and manage multiple WordPress sites from a single installation
Theme & Plugin Development	Extend functionality with PHP, JS, hooks, filters
Gutenberg Block Builder	Build custom blocks using React-based editor
Role-Based User Management	Admin, Editor, Author, Contributor, Subscriber
WooCommerce Integration	Enables full eCommerce store, payment gateways, cart, coupons
SEO Optimization Tools	Yoast, RankMath, sitemap support
Security Hardening	2FA, firewall plugins, DB prefix protection
Automation & Cron Jobs	WP-Cron schedules tasks like backups and email reports
Headless Mode	WordPress as backend + front-end frameworks like Next.js / Flutter
AI-Powered Plugins	Auto-writing, chatbots, spam detection, image alt text generation

These features make WordPress suitable for enterprise-level portals, LMS, eCommerce, blog networks, and SaaS apps.

Q3. [CO3] Describe uploading a video file using WordPress?

Answer:

Uploading a video file in WordPress means hosting the video directly on the website instead of embedding from external platforms.

Steps to Upload Video:

1. Go to **Dashboard** → **Media** → **Add New**
2. Upload file (max limit depends on hosting: usually 8MB–512MB)
3. Insert video into post/page using **Video Block**
4. Configure settings like autoplay, loop, preload, poster image (thumbnail)

Supported Video Formats:

- MP4 (recommended, most compatible)
- WebM
- OGV

Maximum Upload Size:

Controlled by hosting/server php.ini (upload_max_filesize, post_max_size)

Advantages:

- ✓ No third-party ads
- ✓ Full control over file availability
- ✓ Works offline inside LMS / membership sites

Disadvantages:

- ✗ High storage & bandwidth usage
- ✗ Slower page loading if video not compressed
- ✗ No automatic CDN or streaming optimization

Best Practices:

- Compress video before upload (HandBrake, FFMPEG)
- Use a caching plugin + CDN (Cloudflare, BunnyCDN)
- Add subtitles for accessibility
- Add poster thumbnail image to improve UX

Alternative: For performance, most websites use YouTube/Vimeo embed instead of direct upload.
