PAGE NO.: 7

Q1. In an election, candidate A got 75% of the total valid votes. If 15% of total votes were declared invalid and the total no. of votes is 560000, find the no. of valid vote polled in favour of candidate.

(a) 357000 (b) 350000 (c) 350700 (d) None.

Sol

$$\begin{aligned} \text{Total no. of invalid votes} &= 15\% \text{ of } 560000 \\ &= \frac{15}{100} \times 560000 = 84000 \end{aligned}$$

$$\text{Total no. of valid votes} = 560000 - 84000 = 476000$$

Percentage of votes polled in favour of candidate A = 75%.

$$\begin{aligned} \text{Valid votes} &= 75\% \text{ of } 476000 \\ &= \frac{75}{100} \times 476000 = 357000 \end{aligned}$$

— (a)

Q2.

Aaron has 2100 \$ left after spending 30% of the money he took for shopping. How much money did he take along with him?

(a) 3000 \$ (b) 300 \$ (c) 3500 \$ (d) None

Sol

Let the Aaron has took for shopping be x .

$$\begin{aligned} \text{money he spent} &= 30\% \text{ of } x = \frac{30}{100} \times x \\ &= \frac{3x}{10} \end{aligned}$$

$$\text{Money he left} = 2100$$

$$\text{So } x - \frac{3x}{10} = 2100$$

$$\frac{10x - 3x}{10} = 2100$$

$$\frac{7x}{10} = 2100$$

$$x = \frac{300}{2100 \times 10}$$

$$x = 3000 \$$$

Q3.

A shopkeeper bought 600 oranges and 400 bananas. He found 15% of oranges and 8% of bananas were rotten. Find the percentage of fruits in good condition.

- (a) 88% (b) ☒ 87.8% (c) 89% (d) none

Soln

No. of rotten bananas = 15% of 600

$$= \frac{15}{100} \times 600 = 90$$

No. of rotten oranges = 8% of 400

$$\frac{8}{100} \times 400 = 32$$

No. of Total rotten fruits = $90 + 32 = 122$

Total fruits = $600 + 400 = 1000$

Now,

Percentage of fruits in good condition

$$= \frac{1000 - 122}{1000} \times 100$$

$$= \frac{878}{10} = 87.8\%$$

(b)
