

Sec-A

(1) What is the decision making process?

Ans Decision making process involves several steps.

- Identify problem or requirement
- Gather information
- Define criteria
- Generate alternatives
- make decision
- Implement decision
- monitor and adapt.

2. List down various powers of leadership.

-
- Decision making power
 - Communication power
 - Delegating power
 - Coaching and mentoring power
 - Accountability power
 - Influential power

3. Which method is used for selecting the right person for the job? Describe.

- Ans
- Application and Resume screening
 - Assessments and Test
 - Reference and Background Facts checks.
 - Work sample
 - Interviews
 - Decision making

4. Discuss various quality management activities.

- Ans
- Quality Planning
 - Quality assurance
 - Quality control
 - Continuous improvement

- Training and Education
- Customer feedback and Satisfaction

5. Define CASE Tools.

Ans CASE tools or complete aided software Engineering tools, are software application that assist software engineers in various stages of SDLC these tools provide support for tasks like Requirement gathering, analysis, coding, etc.

Sec-B

1. Explain various theories related to organizational behaviour.
- Ans Notable organization behaviour theories are Frederick Taylor's scientific Management MC Gregor's theory X and theory Y and the Human Relations management models. According to business theorise these are three level of organizational behaviour individual level group level and system level.

Organizational behaviour theories

- System theories: this theory views organizations as complex system with interconnected parts. it emphasizes the interdependence and interaction b/w different components, within an organization like teams, departments, etc.
- Motivation theories - Motivation theories explore what drives individuals to perform and excel in their work. theories like Maslow's hierarchy of Needs Herzberg's two-factor theory and expectancy theory provide insights into factors that

- influence employee motivation, satisfaction and Social Exchange Theory - This theory focuses on social relationship and exchange that occurs within organization. This theory helps us understand importance of social interaction, teamwork and collaboration for Project Success.

→ Leadership theories - This theory studies qualities, behaviour, style of effective leaders. theories like transformational leadership, situational leadership and servant leadership provide insights into different approaches to leading software development teams.

2 Discuss Oldham-Hackman Job Char. model.

The Oldham-Hackman Job Characteristics Model is a framework developed to understand the relationship between job design and employee motivation. Richard Hackman and Greg Oldham proposed this model in the 1970s as an extension of Herzberg's two-factor theory and other motivational theories. The model identifies five core job characteristics that contribute to high levels of employee satisfaction and motivation:

this model proposes that five core job characteristics affect three critical psychological states, ultimately impacting work outcomes

Date: ___/___/___

MON	TUE	WED	THU	FRI	SAT	SUN
☐	☐	☐	☐	☐	☐	☐

like satisfaction, motivation, and performance.

- (i) **Skill Variety**: The degree to which the job requires a diverse range of skills and abilities.
 - (ii) **Task Identity**: The extent to which the job involves completing a whole and identifiable piece of work.
 - (iii) **Task Significance**: The perceived importance of the job and its impact on others.
 - (iv) **Autonomy**: The level of independence and control employees have over their work methods and processes.
 - (v) **Feedback**: The availability of clear and timely information about how well employees are performing their jobs.
- **Impact on work outcomes**: When the five core job characteristics are present at high levels, they trigger the three critical psychological states, which in turn lead to positive work outcomes such as:
 - Increased job satisfaction
 - Enhanced motivation
 - Improved performance
 - Reduced absenteeism
 - Lower turnover

Give a brief on Organizational behaviour.

Organizational Behavior (OB) is a field of study that explores the dynamics of individuals and groups within an organizational setting. It examines how people behave in the workplace, how their actions influence the organization, and how the organization

, in turn, affects them. The primary focus of organizational behaviour is to understand, predict, and influence human behaviour to improve organizational effectiveness.

Key components and aspects of organizational behaviour include:

- (1) **Individual Behavior:** Examines the behavior of individual within the organization, considering factors such as personality, perception, motivation, learning and attitudes. Understanding individual behavior is crucial for managing and leading employees effectively.
- (2) **Organizational Structure and Design:** Focuses on the formal and informal structures that shape how work is organized within an organization. It includes the study of authority, roles, responsibilities, communication channels and the overall design of the organization.
- (3) **Leadership and Power:** Explores the role of leaders in influencing and guiding individuals and teams.
- (4) **Organizational Culture:** Examines the shared values, beliefs and norms that shape the organizational environment. Culture influences how employees interact with each other, make decisions and perceive their roles within the organization.
- (5) **Communication:** Studies the various forms of communication within an organization, including verbal and non-verbal communication, formal and informal channels, and the impact of

Communication on organizational effectiveness.

Organizational Behaviour draws from various disciplines including psychology, sociology, anthropology, and management. It provides valuable insights for managers, leaders, and organizational stakeholders to improve communication, enhance employee satisfaction, and create a positive and productive workplace culture.

(See-C)

- (1) Discuss organization and team structure. Explain Maslow's hierarchy of needs.

Ans Organization Structure: Organization structure refers to the way in which an organization is arranged in terms of roles, responsibilities, and reporting relationships. It provides a framework for how work is organized, tasks are divided, and communication flows within the organization.

Common types of organizational structure include, functional structure, divisional structure, matrix structure, flat structure, hierarchical structure.

Team Structure: Teams are groups of individuals working together to achieve common goals. Team structure involves how team members are organized, how tasks are allocated, and how communication and collaboration occur. Different team structures include, functional teams, cross-functional teams, self-managed teams, virtual teams, project teams.

Maslow's Hierarchy of Needs suggests that as lower-level needs are satisfied, individuals become motivated to fulfill

higher-level needs.

Q 2

Define Motivation. Explain approaches given by various researchers/scientists related to motivation.

Ans

Motivation refers to the internal and external factors that drive an individual to take action, achieve goals, and persist in the face of challenges. It is the force that energizes, directs, and sustains behavior. Motivation is a complex and dynamic concept influenced by various psychological, social and environmental factors.

• Approaches to Motivation by Various Researchers/Scientists:

(1) Maslow's Hierarchy of Needs (Abraham Maslow):

→ Abraham Maslow proposed a hierarchy model of human needs, commonly depicted as a pyramid with five levels: Physiological, safety, social, esteem, and self-actualization. According to Maslow, individuals are motivated to satisfy lower-level needs before moving on to higher-level needs.

(2) Herzberg's Two-Factor Theory (Frederick Herzberg):

→ Herzberg identified two sets of factors that influence motivation and job satisfaction: hygiene factors (external conditions like salary and working conditions that can cause dissatisfaction if lacking) and motivators (internal factors like recognition and achievement that lead to satisfaction and motivation).

(3) Social Cognitive Theory (Albert Bandura):

→ Bandura's social cognitive theory emphasizes the role of observational learning and modeling in

Date: / /

☐	☐	☐	☐	☐	☐	☐

motivation. Individuals are motivated by observing others and by the belief in their own ability to perform a task.

(4) Hierarchy of Prepotency (Clark Hull):

- Hull's theory proposes a hierarchy of basic needs that drive behaviour, including physiological needs, safety needs, love and belongingness needs, and self-actualization. It shares similarities with Maslow's hierarchy but is more focused on physiological and biological factors.

3

Write a short note on the following: -

- (a) **Decision Making**:- Decision making is a cognitive process that involves choosing a course of action from among multiple alternatives. It is a fundamental aspect of human behavior and organizational management. Decision-making can range from routine and mundane choices to complex and strategic decisions. The process typically involves identifying the problem, gathering relevant information, evaluating alternatives, and selecting the most appropriate option.

Decision making is influenced by factors such as individual preferences, available information, time constraints, and the context in which the decision is made. Effective decision-making is crucial for organizational success, as it impacts resource allocation, problem-solving, and goal attainment.

- (b) **Stress**: Stress is a physiological and psychological response to a perceived threat or challenge. It can result from various factors, including work pressures, personal issues, or environmental demands. Stress can

Date: / /

☐ ☐ ☐ ☐ ☐ ☐ ☐

be both positive (eustress), motivating individuals to perform better, and negative (distress), leading to adverse health effects. Prolonged or chronic stress can contribute to a range of health issues, including cardiovascular problems, mental health disorders, and impaired immune function.

- (c) Health and Safety: Health and safety in the workplace are critical aspects of organizational management, ensuring the well-being of employees and compliance with legal regulations. This includes maintaining a safe physical environment, providing training on safety procedures, and addressing health-related concerns. Employees have a responsibility to identify and mitigate workplace hazards, provide protective equipment, and establish emergency response plans.
-
